Sample mock fund (simulated prices)

Fund portfolio · snapshot 2026-10-23 · USD

Objective and mandate

Apply a long-only, three-position mandate over four weeks and explain each decision in the journal. Prices are simulated for this sample.

Mode: Fund · base currency: USD · cadence: weekly

Benchmark as declared: S&P 500

Team: Sample team (illustration)

Portfolio summary

Net asset value: USD 16,030

Invested value: USD 13,530

Cash: USD 2,500 (15.60% of NAV)

Largest holding: 43.67% of NAV; top three: 84.40%.

Holdings and rationale

Symbol	Shares	Price	Value	Weight	Rationale
AAPL	20	350	7,000	43.67%	Cash-generative services franchise; sized below the fund's 50% single-name cap.
MSFT	8	510	4,080	25.45%	Diversifies the book into cloud and productivity software.
VOO	5	490	2,450	15.28%	Core index exposure so the fund is not only single-stock risk.

Performance

Time-weighted return: 0.12% across 2 periods.

Starting NAV: USD 15,510 · final NAV: USD 16,030 · external flow: USD 500.

Best period: 2.10% · worst period: -1.94%.

Benchmark return: 2.00% · active return: -1.88%.

The external flow is treated as occurring at the start of its period, so the period return is (end_nav - start_nav - flow) / (start_nav + flow). The time-weighted return chains (1 + period return) across the declared periods. A benchmark is chained the same way. No fees, tax or dividends are applied and no future return is forecast.

Period	Start NAV	End NAV	Flow	Period return	Benchmark
2026-10-16	15,510	15,700	500	-1.94%	1.00%
2026-10-23	15,700	16,030	0	2.10%	0.99%

Journal of decisions

Date	Flow	Benchmark	Note
2026-10-09	0	100	Opened the book with AAPL, MSFT and VOO; cash held at about 16% of NAV.
2026-10-16	500	101	Added USD 500 from the team's contribution and kept the weights; no trade this week.
2026-10-23	0	102	Held through a flat week; reviewed the AAPL weight against the 50% mandate cap.

Data provenance

Symbol	Price	Source	As of
AAPL	350	sample (simulated)	2026-10-23
MSFT	510	sample (simulated)	2026-10-23
VOO	490	sample (simulated)	2026-10-23

Checks

- All 12 checks passed (6 valuation, 6 performance).
- The checks confirm the arithmetic and the weights; they do not confirm the prices, which are yours to verify.

Assumptions and limits

- Prices are the dated values recorded in this snapshot, in one base currency; no FX conversion, fees, tax or dividends are applied.
- Weights are value / NAV, so the holding weights plus cash equal one.
- A snapshot is a valuation, not a sale price, a forecast or a recommendation.
- The external flow is treated as occurring at the start of its period; the return chains the declared periods.
- A benchmark is the level the student declared; the active return is descriptive, not a promise.
- Past performance is a record, not a forecast.
- This report was generated from the stored snapshot and the frozen method result; the figures are not recomputed here.
